FOR IMMEDIATE RELEASE

Air Serbia Takes Flight with LISA Aircraft Records Management In a SaaS Model

Air Serbia has selected LISA Aircraft Records Management as their digital aircraft records management system, marking a significant step in the airline's digital transformation journey. With a fleet of 29 aircraft, Air Serbia gains access to a comprehensive suite of tools tailored to streamline its records management. This implementation also features a custom API integration with AMOS, the industry-leading maintenance and engineering software, ensuring that the aircraft archive remains up-to-date and ready for redelivery at a moment's notice.

“At AMROS, we’ve always said that managing aircraft records well is an art — one that requires the right tools,” **said Giuseppe Renga, CEO of AMROS Group.** “With LISA Aircraft Records Management, Air Serbia now has a system that speaks the same language as their fleet: user-friendly, seamless in reliability, fluent in readiness. LISA brings clarity, structure, and real-time confidence to aircraft records management — a part of the business that too often stays in the background.”

Developed by AMROS Innovations, LISA offers an intelligent, AI-powered, centralized platform for managing aircraft records, providing full lifecycle transparency and operational control.

Air Serbia's adoption of LISA underlines the growing momentum among airlines to invest in digital tools and AI that simplify processes, improve regulatory oversight, and establish a consistent foundation for effective aircraft asset management.

About Air Serbia

Air Serbia is the national airline of Serbia, offering a wide range of regional and international flights. The airline operates a fleet of 29 modern aircraft, connecting passengers to more than 80 destinations across Europe, the Middle East, and North America. Air Serbia is a key player in wider Balkan regional air travel, committed to providing pleasant experiences for both leisure and business travelers.

About LISA Aircraft Records Management

LISA Aircraft Records management is an AI-powered aircraft records management platform developed by AMROS Innovations. Designed for airlines, lessors, and MROs, LISA offers a centralized, digital solution to streamline the management of aircraft records across their lifecycle. With real-time data access, full lifecycle transparency, and seamless integrations with existing systems, LISA enables efficient, accurate, and compliance-driven operations. Its innovative approach empowers organizations to reduce complexity and enhance operational confidence in managing their fleets.
